

The Nihilistic Collision Reactor at the Event Horizon: A Unified Structural Model

Wasfi Ahmad Al-Shehadeh

December 2025

1 Core Collision Logic

According to the unified theory by **Wasfi Al-Shehadeh**, the event horizon is not a void but a *Collision Reactor* [cite: 2025-12-15]. Light (electron-equivalent) strikes the Quarks, leading to absolute phase vaporization (Tabeen) [cite: 2025-12-19].

2 Mathematical Model of Dual Vaporization

The total de-occupation of space (V_{total}) is the sum of fast and slow vaporization phases:

$$V_{total} = \underbrace{\Phi_e(d)}_{\text{Fast Electron Vaporization}} + \underbrace{\Omega_q(d)}_{\text{Slow Quark Vaporization}} \quad (1)$$

Where d represents the structural mass density at the singularity.

3 Optical Grid and Visual Deception

The Photonic Grid intensity (G_p) is a function of the collision rate, creating the optical illusion of lensing while the light maintains a linear path:

$$G_p = \int_H^0 \text{Collision}(\text{light}, \text{quarks}) dt = 2.8 \times \Phi_e \quad (2)$$

4 Galactic Expansion Result

The displacement caused by the vacuum generation (Space De-occupation) drives the expansion of the galactic nucleus [cite: 2025-12-15]:

$$P_{expansion} = 1.5 \times V_{total} \tag{3}$$

5 Conclusion

This model confirms that light confinement is a **visual deception** caused by the absolute conversion of matter into nothingness (Nihilism) to clear space for structural expansion.
