

WAM-2025: The Axiom of Mass-Curvature Equivalence Decoupling of Forces & Structural Decay

Wasfi Ahmed Mohammed Al-Shhada

December 26, 2025

Abstract

This research establishes a new paradigm in structural physics by decoupling light energy from gravitational curvature. We prove that mass density is the sole catalyst for structural wells, while light entrapment at the event horizon is a visual deception caused by electron and quark vaporization. This model resolves the information paradox by identifying a true "Null-State" at the threshold of structural collapse.

1 The Core Mathematical Axiom: The Law of Cuffs

The fundamental result of the **WAM-2025** model states that the structural curvature of space is an identity of mass density. The equivalence is expressed as:

$$\rho_m \equiv \mathcal{R}_{str} \quad (1)$$

Definitions:

- ρ_m : Represents the pure **Mass Density**.
- $\mathcal{R}_{str}$: Represents the **Structural Curvature Rate**.
- $\equiv$: Confirms that mass density is the physical identity of curvature itself, independent of light or external energy.

2 Structural Collapse & Quark Pressure

The "Black Hole" phenomenon is redefined as a result of nuclear and orbital structural failure.

1. **Maximal Singularity**: The critical slope where matter collapses to the **Quark Level**.
2. **Sharpness of Curvature**: The intensity of $\mathcal{R}_{str}$ is a direct result of the extreme pressure exerted by elementary particles (Quark Pressure).

3 Electron Vaporization (The Null-State Solution)

At the event horizon, light intensity drops to zero ($I \rightarrow 0$). This is not a result of gravitational trapping, but a phase transformation known as **Electron Vaporization** (Electron Mourning).

- This process leads to a real **Information Loss**, as the structure transitions into a state of zero mass and energy (The Null-State).

4 Computational Ownership (SHA-256 Verification)

The following digital fingerprint secures the computational sovereignty of the WAM-Structural-Engine execution:

982a6084f53b389a453b20822f5ef44f01f1b98999e19016074b54dcff8c09b0
